

Osman Environmental Solutions, LLC

Air Quality Permitting

Of all the environmental media, air is often regarded as the most challenging. With the most onerous regulations, obtaining an air permit is frequently the longest-lead item in permitting a plant, whether it be a greenfield facility or simply a modification to an existing one.

At Osman Environmental Solutions (OES) we understand the nuances of air permitting. The majority of our staff have worked as state regulators during their career (most of us in senior-level positions), so we know what regulators are looking for in an application—that knowledge helps us streamline the permitting process for our clients.

OES has expertise in all aspects of air permitting, including:

- Emissions calculations,
- Control technology determinations,
- Air quality impact assessments,
- Drafting of permit conditions, and
- Negotiating with regulators.

At OES, we always strive to be a business partner with you. When it comes to air permitting, our ultimate goal is to assist you in obtaining your permits as expeditiously as possible, and with conditions that allow you to operate your facility profitably.
